The papers in this volume comprise the refereed proceedings of the conference 'Artificial Intelligence in Theory and Practice' (IFIP AI 2006), which formed part of the 19th World Computer Congress of IFIP, the International Federation for Information Processing (WCC- 2006), in Santiago, Chile in August 2006. The conference is organised by the IFIP Technical Committee on Artificial Intelligence (Technical Committee 12) and its Working Group 12.5 (Artificial Intelligence Applications). All papers were reviewed by at least two members of our Programme Committee. The best papers were selected for the conference and are included in this volume. The international nature of IFIP is amply reflected in the large number of countries represented here. The conference featured invited talks by Rose Dieng, John Atkinson, John Debenham and myself. IFIP AI 2006 also included the Second IFIP Symposium on Professional Practice in Artificial Intelligence, organised by Professor John Debenham, which ran alongside the refereed papers. I should like to thank the conference chair, Professor Debenham for all his efforts in organising the Symposium and the members of our programme committee for reviewing an unexpectedly large number of papers to a very tight deadline. This is the latest in a series of conferences organised by IFIP Technical Committee 12 dedicated to the techniques of Artificial Intelligence and their real-world applications. The wide range and importance of these applications is clearly indicated by the papers in this volume. Further information about TCI 2 can be found on our website <http://www.ifiptcl2.org>.

School counselors often struggle to feel confident in delivering effective assistance to students due to a variety of reasons that currently do not have enough research or information developed. This leads to a struggle for counselors to adequately address tough and relevant issues. With these issues remaining unaddressed, or addressed less effectively, there is a concern that school counselors cannot mitigate these issues due to not being adequately informed. This can lead to a lifetime of consequences for students. Strengthening School Counselor Advocacy and Practice for Important Populations and Difficult Topics presents emerging research that seek to answer the tough and often unaddressed questions, target present-day issues of student populations, and prepare school counselors to feel confident and competent in their counseling and advocacy practice. These chapters, using the newest information available, will address these concerns and provide the

best counseling work possible for underserved populations. While covering research on counseling for students with chronic illnesses, mixed-statuses, family issues, minority students, LGBTQ+ youth, and more, this book is ideal for school counselors, counseling educators, practitioners, stakeholders, researchers, academicians, and students who are interested in school counseling and meeting the needs of diverse and important populations of students.

This book provides pragmatic strategies and models for student assessment and ameliorates the heightened sense of confusion that too many educators and leaders experience around the complexities associated with assessment. In particular, it offers guidance to school and district personnel charged with fair and appropriate assessment of students who represent a wide variety of abilities and cultures. Chapters focus on issues that directly impact the educational lives of teachers, students, parents, and caregivers. Importantly, the confluence of assessment practices and community expectations also are highlighted. Assessment is highly politicised in contemporary society and this book will both confirm and challenge readers' beliefs and practices. Indeed, discerning readers will understand that the chapters offer them a bridge from many established assessment paradigms to pragmatic, ethical solutions that align with current expectations for schools and districts. In Part One, readers engage with concepts and skills needed by school learning leaders to guide optimal assessment practices. Part Two delves into student assessment within and across disciplines. Part Three provides pragmatic approaches that address assessment in the context of inclusive intercultural education, pluralism, and globalisation.

The right turn in U. S. politics has increased conflict over both ends and means in government budgeting and financial management. Overlapping and competing views of the way the world works drive finance officials' practice. Taking a new look at public financial management that acknowledges the multiple, competing realities, Government Budgeting and Financial Management in Practice: Logics to Make Sense of Ambiguity examines transaction cost economics and other small government, managed-by-the-market techniques as the latest reincarnation of public budgeting and financial management orthodoxy. Gerald J. Miller reviews new research on the continuing validity of the political dimension of government finance decisions and the multiple, intensely argued constructions of reality the finance official must make sense of. Miller discusses major advances in interpretive approaches to budgeting and finance and how they dominate writing in the broader field of public administration. He also examines the effects of the explosion of information systems, new budget techniques, nonconventional ways of spending, and new technologies. The book uses a question as the motivating force to understand some facets of today's government budgeting, finance, and financial management: where do the critical assumptions come from to drive financial

management? Miller takes the history of reform, developments in the field and the logics finance officials say they use as sources for these assumptions and examines what they reveal about constructions of the government finance world. Exploring new avenues of financial management thinking, the book discusses ambiguity and interpretations that move the unclear preferences, ends, and goals toward consensus. The author identifies an alternative approach to research that explains important facets of financial management. This approach is drawn directly from practice, events and problems in public organizations and from the creedal bent of many political actors in competition. In this book about communities of practice in the international, higher education sector, the authors articulate the theoretical foundations of communities of practice (CoPs), research into their application in higher education, leadership roles and how CoPs sustain and support professional learning. Research demonstrates that communities of practice build professional and personal links both within and across faculty, student services and administrative and support units. This book describes how community of practice members may be physically co-located and how social media can be used to connect members across geographically diverse locations. It positions higher education communities of practice within the broader community of practice and social learning literature, and articulates the importance of community of practice leadership roles, and the growing focus on the use of social media for community of practice implementation. The multiple perspectives provide higher education leaders, academic and professional staff with the means to establish, or reflect on existing CoPs, by sharing insights and critical reflections on their implementation strategies, practical guidelines and ideas on how community of practice's theoretical underpinnings can be tailored to the higher education context.

This volume contains the proceedings of the 14th International Conference on Principles and Practice of Constraint Programming (CP 2008) held in Sydney, Australia, September 14–18, 2008. The conference was held in conjunction with the International Conference on Automated Planning and Scheduling (ICAPS 2008) and the International Conference on Knowledge Representation and Reasoning (KR 2008). Information about the conference can be found at the website <http://www.unimelb.edu.au/cp2008/>. Held annually, the CP conference series is the premier international conference on constraint programming. The conference focuses on all aspects of computing with constraints. The CP conference series is organized by the Association for Constraint Programming (ACP). Information about the conferences in the series can be found on the Web at <http://www.cs.ualberta.ca/~ai/cp/>. Information about ACP can be found at <http://www.a4cp.org/>. CP 2008 included two calls for contributions: a call for research papers, describing novel contributions in the field, and a call for application papers, describing applications of constraint technology. For the first time authors could directly submit short papers for consideration by the committee. The research track received 84 long submissions and 21 short submissions and the application track received 15 long submissions. Each paper received at least three reviews, which the authors had the opportunity to see and to react to, before the papers and their reviews were discussed extensively by the members of the Program Committee.

Landslides and Engineered Slopes. Experience, Theory and Practice contains the invited lectures and all papers presented at the 12th International Symposium on Landslides, (Naples, Italy, 12-19 June 2016). The book aims to emphasize the relationship

between landslides and other natural hazards. Hence, three of the main sessions focus on Volcanic-induced landslides, Earthquake-induced landslides and Weather-induced landslides respectively, while the fourth main session deals with Human-induced landslides. Some papers presented in a special session devoted to "Subareal and submarine landslide processes and hazard" and in a "Young Session" complete the books. Landslides and Engineered Slopes. Experience, Theory and Practice underlines the importance of the classic approach of modern science, which moves from experience to theory, as the basic instrument to study landslides. Experience is the key to understand the natural phenomena focusing on all the factors that play a major role. Theory is the instrument to manage the data provided by experience following a mathematical approach; this allows not only to clarify the nature and the deep causes of phenomena but mostly, to predict future and, if required, manage similar events. Practical benefits from the results of theory to protect people and man-made works. Landslides and Engineered Slopes. Experience, Theory and Practice is useful to scientists and practitioners working in the areas of rock and soil mechanics, geotechnical engineering, engineering geology and geology.

Nursing Theorists and Their Work, 9th Edition provides you with an in-depth look at 39 theorists of historical, international, and significant importance. This new edition has been updated with an improved writing style, added case studies, critical thinking activities, and in-depth objective critiques of nursing theories that help bridge the gap between theory and application. In addition, the six levels of abstraction (philosophy, conceptual models, grand theory, theory, middle-range theory, and future of nursing theory) are graphically depicted throughout the book to help you understand the context of the various theories. Each theorist chapter is written by a scholar specializing in that particular theorist's work, often having worked closely with the theorists, to provide the most accurate and complete information possible. A case study at the end of each theorist chapter puts the theory into a larger perspective,

demonstrating how it can be applied to practice. Critical Thinking Activities at the end of each theorist chapter help you process the theory presented and apply it to personal and hypothetical practice situations. Diagrams for theories help you visualize and better understand inherently abstract concepts. A Brief Summary in each theorist chapter helps you review for tests and confirm their comprehension. A Major Concepts & Definitions box included in each theorist chapter outlines the theory's most significant ideas and clarifies content-specific vocabulary. Points for Further Study at the end of each chapter directs you to assets available for additional information. Quotes from the theorist make each complex theory more memorable. An extensive bibliography at the conclusion of each theorist chapter outlines numerous primary and secondary sources of information for further study. NEW! Improved writing style and increased use of subheadings make the narrative more concise, direct, and accessible. NEW! Updated research and findings incorporate new content along with more examples and clinical correlations. NEW! History of Nursing Science chapter emphasizes nursing science updates UNIQUE! This book covers the design, evaluation, and learning for international interventions aiming to promote peace. More specifically, it reconceptualises this space by critically analysing mainstream approaches – presenting both conceptual and empirical content. This volume offers a variety of original and insightful contributions to the debates grappling with the adoption of complexity thinking. Insights from Complexity Thinking for Peacebuilding Practice and Evaluation addresses the core dilemma that practitioners have to confront: how to function in situations that are fast changing and complex, when equipped with tools designed for neither? How do we reconcile the tension between the use of linear causal logic and the dynamic political transitions that interventions are meant to assist? Readers will be given a rare opportunity to superimpose the latest conceptual innovations with the latest case study applications and from a diverse spectrum of organisational vantage points. This provides the myriad practitioners and consultants in this space with invaluable insights as to how to improve their trade craft, while ensuring policy makers and the accompanying research/academic industry have clearer guidance and innovative thinking. This edited volume provides critically innovative offerings for the audiences that make up this broad area's practitioners, researchers/academics/educators, and consultants, as well as policy makers.

The papers in this volume comprise the refereed proceedings of the conference Artificial Intelligence in Theory and Practice (IFIP AI 2010), which formed part of the 21st World Computer Congress of IFIP, the International Federation for Information Processing (WCC-2010), in Brisbane, Australia in September 2010. The conference was organized by the IFIP Technical Committee on Artificial Intelligence (Technical Committee 12) and its Working Group 12.5 (Artificial Intelligence Applications). All papers were reviewed by at least two members of our Program Committee. Final decisions were made by the Executive Program Committee, which comprised John Debenham (University of Technology, Sydney, Australia), Ilias Maglogiannis (University of Central Greece, Lamia, Greece), Eunika Mercier-Laurent (KIM, France) and myself. The best papers were selected for the conference, either as long papers (maximum 10 pages) or as short papers (maximum 5 pages) and are included in this volume. The international nature of IFIP is amply reflected in the large number of countries represented here. I should like to thank the Conference Chair, Tharam Dillon, for all his efforts and the members of our Program Committee for reviewing papers under a very tight deadline.

This book bridges a major gap between the theoretical and practical issues relating to community research methodologies. Through a series of reflective chapters, it explores what community research means in a range of settings and for a range of people, examining what it takes to produce a rigorous research project. Surveying important new advancements in research methodology, it measures theory against practice to offer strong recommendations for new approaches. With studentfriendly features, it will be an invaluable book for both those learning and those teaching community research.

Given the current climate of results-driven accountability, school-based professionals have a significant contribution to make in improving the impact of programs and initiatives through the application of program evaluation methods and tools to inform decision making within a multi-tier system of supports framework. And yet there is currently a dearth of practical resources dedicated to developing school psychologists' competencies in program evaluation. Advancing Evidence-Based Practice through Program Evaluation will meet the needs of school psychologists and other school-based professionals seeking to use program evaluation approaches to enhance data-based decision making and accountability at a program and systems-level. This practical guide provides the most cutting-edge evaluation frameworks, methods, and tools available, with particular emphasis on the rapidly-developing areas of implementation research, evidence-based professional learning,

and innovative approaches to communicating evaluation findings. The book will support school professionals in daily practice by enhancing and extending their knowledge and skills in measurement, assessment, consultation for systems change and the use of evidence-based interventions for academic and social/behavioral concerns, with a focus on evaluating the implementation and outcomes of school-based programs. The book will also facilitate the professional development of those currently engaged in graduate preparation programs in education, educational leadership, school counseling, and school social work, as well as the university faculty who guide their professional preparation. Finally, school professionals may also use *Advancing Evidence-Based Practice through Program Evaluation* to develop their professional competencies in implementing new initiatives funded by grants with clear expectations for program evaluation.
