Originally published in 1993. This study was written in 1946 having been commissioned by a large corporation in the food industry. The insights from this agricultural economics perspective even now are highly interesting. At the time there was real concern over food shortage and the UN and US government assumed there would be a problem for a long time to come. This study showed otherwise and set out suggestions for food policy and foreign aid policy with regards to food. This thorough study is an exemplary snapshot of the history of food policy and has lessons still to share.

"This book chronicles the life and times of Major General A.S. Naravane, both in peace and war. He joined the Indian Military Academy, Dehra Dun in 1936 and was commissioned in 1938. He was amongst the first few who were accepted for the Indian Artillery, which, till 1934 was offered exclusively by the British. His early days in the regiment were one of very hard work and training. The profession of arms was a very highly prized occupation and all was done to make the young officers worthy of being in it. The training methods then are described with much pride and nostalgia. Naravane went to war as a captain and his artillery regiment, the 2nd Field, soon saw action against the then invincible Germans under Rommel. At Bir Hachiem he was taken prisoner. The trials and tribulations as a prisoner are worth reading, especially for the young officer, as they show that whatever the conditions, the first duty of every prisoner

of war is to try and escape. Liberty may be lost, but courage and pride in one's regiment, never. The transition from the British Indian Army to a national army is brought out frankly but with restraint. His career and rise to the post of Director of Artillery is, in a way, the conflict of the old and the new that every pre-war officer had to face"--Dust jacket.

Graphic Violence provides an innovative introduction to the relationship between violence and visual media, discussing how media consumers and producers can think critically about and interact with violent visual content. It comprehensively surveys predominant theories of media violence and the research supporting and challenging them, addressing issues ranging from social learning, to representations of war and terrorism, to gender and hyper-masculinity. Each chapter features original artwork presenting a story in the style of a graphic novel to demonstrate the concepts at hand. Truly unique in its approach to the subject and medium, this volume is an excellent resource for undergraduate students of communication and media theory as well as anyone interested in understanding the causes and effects of violence in media.

The book introduces modern high-order methods for computational fluid dynamics. As

compared to low order finite volumes predominant in today's production codes, higher order discretizations significantly reduce dispersion errors, the main source of error in long-time simulations of flow at higher Reynolds numbers. A major goal of this book is to teach the basics of the discontinuous Galerkin (DG) method in terms of its finite volume and finite element ingredients. It also discusses the computational efficiency of high-order methods versus state-of-the-art low order methods in the finite difference context, given that accuracy requirements in engineering are often not overly strict. The book mainly addresses researchers and doctoral students in engineering, applied mathematics, physics and high-performance computing with a strong interest in the interdisciplinary aspects of computational fluid dynamics. It is also well-suited for practicing computational engineers who would like to gain an overview of discontinuous Galerkin methods, modern algorithmic realizations, and high-performance implementations.

Written as a sequel to *The Agricultural Tractor 1855-1950* by R. B. Gray and *Farm Tractors 1950-1975* by Lester Larson, each chapter lists most of the new tractors introduced for that year, a summary of the specifications for the models, and information about the companies manufacturing the tractors.

This book explores the conditions under which Nuclear Weapons Free Zones (NWFZs) can be established. It analyzes four hypotheses that explain the factors contributing to the formation of NWFZs, building upon realist, constructivist and liberal theories from international relations. Through structured focused comparison, the book presents and compares the emergence of NWFZs in Latin America, the South Pacific, Southeast Asia, Africa, Central Asia, and the Middle East, which is a prospect for a NWFZ. The book argues that NWFZ projects depend on

the following conditions: the security interest of regional states in avoiding nuclear threats, preexisting regional institutions and regional economic cooperation, leadership by a core of regional powers and shared interest in spreading non-proliferation norms. Democracy is not a necessary condition, but democratization can help overcome barriers presented by hesitant or opposed regional governments. As too many of the mentioned necessary conditions are lacking in the Middle East, a NWFZ project, thus, will be possible only after major political changes. This book will be of much interest to students of nuclear proliferation, arms control, security studies and International Relations.

Jorgensen's latest work is an exploratory look into the ways we practice and represent music education through the metaphors and models that appear in everyday

life. These metaphors and models serve as entry points into a deeper understanding of music education that moves beyond literal ways of thinking and doing and allows for a more creative embodiment of musical thought. Seeing the reader as a partner in the creation of meaning, Jorgensen intends for this book to be experienced by, rather than dictated to, the reader. Jorgensen's hope is that the intersections of art and philosophy, and metaphor and model can provide a richer and more imaginative view of music education.

This illustrated work covers the stories of five British engineering companies that produced successful ranges of agricultural, earthmoving or construction machinery. County, Doe, Chaseside, Muir-Hill, Matbro and Bray all made extensive use of the Ford tractor skid unit as a basis for their machines and they pioneered the development of the four-wheel drive agricultural tractor in Britain. Stuart Gibbard gives details of all the main models and machines of these manufacturers. He chronicles the fortunes of the firms from the beginning of the 20th century to the present day and discusses many of the personalities involved.

Althusser and Law is the first book specifically dedicated to the place of law in Louis Althusser's philosophy. The growing importance of Althusser's philosophy in contemporary debates on the left has - for practical and political, as well theoretical reasons - made a sustained consideration of his conception of law more necessary than ever. As a form of what Althusser called 'Ideological State Apparatuses', law is at the forefront of political struggles: from the destruction of Labour Law to the exploitation of Patent Law; from the privatisation of Public Law to the ongoing hegemony of

Commercial Law; and from the discourse on Human Rights to the practice of judicial courts. Is Althusser still useful in helping us to understand these struggles? Does he have something to teach us about how law is produced, and how it is used and misused? This collection demonstrates that Althusser's ideas about law are more important, and more contemporary, than ever. Indeed, the contributors to Althusser and Law argue that Althusser offers a new and invaluable perspective on the place of law in contemporary life.
