In turn, a major portion of the book focuses on relevant tools that students and practitioners need to be familiar with: 8D reports, acceptance sampling, failure tree analysis, FMEA, control charts, correlation analysis, designing experiments, estimating parameters and confidence intervals, event tree analysis, HAZOP, Ishikawa diagrams, Monte Carlo simulation, regression analysis, reliability theory, data sampling and surveys, testing hypotheses, and much more. An overview of the necessary mathematical concepts is also provided to help readers understand the technicalities of the tools discussed. A down-to-earth yet thorough approach is employed throughout the book to help practitioners and management students alike easily grasp the various topics.

Every industry has its standard professional directory -- advertising has its Black Book, manufacturing its Thomas's Register -- except, that is, for architecture...and design...and construction. While there are dozens of smaller directories, each addressing a specific market niche, none speak to all three industries in a comprehensive way. And larger product directories, like Sweets, are advertising driven and therefore incomplete. Felder's Comprehensive is the first pan-industry guide of its kind, and it is many times more comprehensive than the nearest competitor. It is an annual desk reference, directory, and product source guide with more reference information than any other title currently available. It contains thousands of listings of time-sensitive and timeless reference information for anyone involved in the business or practice of architecture, design, design/build, construction, interior design, facility management, and real-estate development. For example, readers can find listings for more than 12,000 manufacturers of furnishings, fixtures, equipment, and materials listed alphabetically, and, most importantly, by product category. Felder's also lists design competitions, domestic and international trade shows, trade publications and other media, trade associations, professional organizations, and more. Most sections are indexed and cross-referenced for easy referral and identification. Felder's is the first truly comprehensive reference guide of its kind for the A/E/C marketplace and is certain to become the industry standard. Combines language tutorials with application design advice to cover the PHP server-side scripting language and the MySQL database engine.

This foodborne disease outbreak prevention manual is the first of its kind for the retail food service industry. Respected public health professional Hal King helps the reader understand, design, and implement a food safety management system that will achieve Active Managerial Control in all retail food service establishments, whether as part of a multi-restaurant chain or for multi-restaurant franchisees. According to the most recently published data by the Centers for Disease Control and Prevention (CDC), retail food service establishments are the most commonly reported locations (60%) leading to foodborne disease outbreaks in the United States every year. The Food and Drug Administration (FDA) has reported that in order to effectively reduce the major foodborne illness risk factors in retail food service, a food service business should use Food Safety Management Systems (FSMS); however less than 11% of audited food service businesses in a 2018 report were found using a well-documented FSMS. Clearly, there needs to be more focus on the prevention of foodborne disease illnesses and outbreaks in retail food service establishments. The purpose of this book is to help retail food service businesses implement FSMS to achieve Active Managerial Control (AMC) of foodborne illness risk factors. It is a key resource for retail professionals at all levels of the retail food service industry, and those leaders tasked to build and manage food safety departments within these organizations.
