The book presents a detailed case for the transformation of mobility. After over a century of rapid growth in distances travelled and the multiplication of expensive infrastructure (roads, high speed rail, airports) we have passed a tipping point. Our transport systems globally and regionally now account for millions of deaths each year (air pollution and crashes), eye-wateringly large subsidies and demands on public funds and have created unfriendly, unpleasant spaces that damage community life and foster obesity. The time has come for a new transport paradigm and one that is ethical, child-friendly and nurturing of local economic vitality and resilience. The book sets out how this can be done and focusses on the "three zeroes". We can have all the advantages of gaining high quality access to our chosen destinations but in future we will do this with zero deaths in road traffic, zero air pollution from traffic sources and zero greenhouse gas emissions to counter climate change threats.

This book, "The Gateway To Our Body" is all about our mouth, it's parts, the ways of maintaining the oral health, prevention of problems and the treatment needed for each problem. We are what we eat and whatever we eat, directly impacts oral health too. To eat what we want to eat, we need good oral health conditions. So, the food we eat and the oral health are interdependent, like if we don't take good food, we compromise our oral health. Again, with compromised oral health we cannot eat food properly, which in turn compromises our overall health. Because the mouth is the entry gate of the body, it becomes very important to keep it healthy to keep our entire body healthy. So proper

This book can be regarded as 'Soft computing for physicists and chemists self-taught'. It prepares the readers with a solid background of soft computing and how to adapt soft computing techniques to problem solving in physical and chemical research. Soft computing methods have been little explored by researchers in physical and chemical sciences primarily because of the absence of books that bridge the gap between the traditional computing paradigm pursued by researchers in science and the new soft computing paradigm that has emerged in computer science. This book is the interface between these primary sources and researchers in physics and chemistry.

gone to the gym and you have felt complexed with the size of your penis? If that's the case, congratulations because thanks to this book you will be able to increase the girth and the length of your penis PERMANENTLY. There are many sites that promise to increase your penis size 3,4 and up to 7 inches in length in a few weeks, that is totally false but if you use some of the methods I recommend in this book and you are CONSISTENT and DISCIPLINED you will see a very solid progression, the results vary from person to person but normally if you stay dedicated can expect results in few weeks or month.

Pre-crime aims to pre-empt 'would-be-criminals' and predict future crime. Although the term is borrowed from science fiction, the drive to predict and pre-empt crime is a present-day reality. This book critically explores this major twenty-first century

development in crime and justice. This first in-depth study of pre-crime defines and describes different types of pre-crime and compares it to traditional post-crime and crime risk approaches. It analyses the rationales that underpin pre-crime as a response to threats, particularly terrorism, and shows how it is spreading to other areas. It also underlines the historical continuities that prefigure the emergence of pre-crime, as well as exploring the new technologies and forms of surveillance that claim the ability to predict crime and identify future criminals. Through the use of examples and case studies it provides insights into how pre-crime generates the crimes it purports to counter, providing compelling evidence of the problems that arise when we act as if we know the future and aim to control it through punishing, disrupting or incapacitating those we predict might commit future crimes. Drawing on literature from criminology, law, international relations, security and globalization studies, this book sets out a coherent framework for the continued study of pre-crime and addresses key issues such as terminology, its links to past practises, its likely future trajectories and its impact on security, crime and justice. It is essential reading for academics and students in security studies, criminology, counter-terrorism, surveillance, policing and law, as well as practitioners and professionals in these fields.

and discusses the many varieties of approaches used by researchers to investigate the properties and functions of mammary stem cells. The beginning chapters provide readers with an introduction to mammary stem cells, and the processes used to characterize stem cells and isolate them via fluorescent activated cell sorting. The next few chapters discuss DNA and mRNA sequencing, proteomic techniques to help profile cells, lentiviral cell transduction for gene expression, and in vivo lineage tracing. The final few chapters are dedicated to following stem cells from their initial niche to the new microenvironment at their metastasis site, and to studying these cells using physical and mathematical approaches. Written in the highly successful *Methods in Molecular Biology* series format, the chapters include the kind of detailed description and implementation advice that is crucial for getting optimal results in the laboratory. Authoritative and cutting-edge, *Mammary Stem Cells: Methods and Protocols* aims to help members of the scientific community explore the behavior of stem cells and how to work with them in order to guide the design of new and complimentary strategies to be applied in the clinic with the ultimate end goal of fighting breast cancer.

This book focuses on predictive, preventative and personalized medicine (PPPM) and how it is related to the healthcare of rare diseases. Readers will discover how advanced rare diseases healthcare provides an excellent “proof-of-principles” for the personalisation of healthcare systems on a global scale. Chapters look at national plans for rare disease, at biobanking, gene identification, rare cancers, virus gene therapy , induced pluripotency for cell therapy amongst other topics. There is a chapter dedicated to personalized medicine for hereditary deafness and another exploring the complexity of genotype-phenotype correlations. Specific diseases such as Fabry's, Gauchers and mitochondrial cytopathies are highlighted and we look at enzyme replacement therapy in lysosomal storage diseases. This work is part of a series, produced with the involvement of the European Association for Predictive, Preventive and Personalised Medicine. The series focusses on the concept of an integrative medical approach by

This collection is designed to bring together some of the best work on the nature of representation being done by both established senior philosophers of science and younger researchers. Most of the pieces, while appealing to existing traditions of scientific representation, explore new types of questions, such as: how understanding can be developed within computational science; how the format of representations matters for their use, be it for the purpose of research or education; how the concepts of emergence and supervenience can be further analyzed by taking into account computational science; or how the emphasis upon tractability--a particularly important issue in computational science--sheds new light on the philosophical analysis of scientific reasoning.

Everything you wanted to know about sex and love in Islam, but were hesitant to ask about: polygamy, contraception allowed by Sharia, oral and group sex, homosexual marriages and also the relationship with jinns, masturbation and mysteries of martial relations - all that is allowed and all that is prohibited in sexual relations in this noble and pure religion. Many people both in the West and Russia continue to have a mistaken illusion that love, sex and variability of relations between man and woman are either suppressed in Islam or in contrary exceed all norms of decency. the book is an insight into this matter. The Muslim man is perceived as an ideal type of an always ready sexual partner. Love and Sex in Islam lifts the veil covering the delicate theme, in which the phenomena seeming incompatible turn out to be good neighbors.

contemporary police relations with vulnerable and marginalised communities. But how do police effectively lead conversations with such communities about problems arising from prejudice? Contemporary police are expected to be active agents in the pursuit of social justice and human rights by stamping out prejudice and group-based animosity. At the same time, police have been criticised in over-policing targeted communities as potential perpetrators, as well as under-policing these same communities as victims of crime. Despite this history, the demand for impartial law enforcement requires police to change their engagement with targeted communities and kindle trust as priorities in strengthening their response to hate crime. Drawing upon a research partnership between police and academics, this book entwines current law enforcement responses with key debates on the meaning of hate crime to explore the potential for misunderstandings of hate crime between police and communities, and illuminates ways to overcome communication difficulties. This book will be important reading for students taking courses in hate crime, as well as victimology, policing, and crime and community.

Classic works of speculative fiction from the earliest masters of the genre. Classic Science Fiction includes nine stories from masters of early science fiction: H. G. Wells, Jules Verne, H. P. Lovecraft, Edgar Allen Poe, Jack London, Fitz James O'Brien, Charlotte Perkins Gilman, and Stanley G. Weinbaum. The exploration of new concepts and technologies has driven the genre since its earliest days, and these works demonstrate how science fiction evolved to encompass not only speculative science but also humanity's role in the universe. In Philip K. Dick's short story *Minority Report*, the institution of Precrime punishes people with imprisonment for crimes they would have committed had they not been prevented. With Dick's allegorical inspiration, the authors of *Criminal Law and Precrime: Legal Studies in Canadian Punishment and Surveillance in Anticipation of Criminal Guilt* posit that recent developments in Canadian law indicate a trend toward imposing punitive measures at increasingly earlier stages of the prosecutorial process. The result is a potentially new field of criminal management that could be characterized as "precrime"—particularly the use of the law as a technology of surveillance and prevention since "terror" became a justification for intervention. The authors note that as risk management logics (based in actuarial sciences) have shifted to precautionary ones (based in administrative sciences), the law has responded by developing techniques in the

arena of criminal regulation in light of the "war on terror": the need to ensure security, the proliferation of digital data, and the development of drones, social networking, and cloud storage to gather personal data. The authors view shifts in criminal investigation; the substantive criminal law of sexual expression, conduct, and work; and civil forfeiture as emblematic of precrime populism. The unifying theme of these techniques is that they occur prior to state-identified crime, arise out of a precautionary philosophy, and seek to presume (or circumvent) criminality. The book is a provocative read for scholars and students in criminal law, policing, and surveillance, as well as for those interested in how areas of law, such as immigration, health, and anti-terrorism, are mobilizing the logics of risk and surveillance in new ways that emphasize precaution. The authors invite legal scholars to place the analytical lens of precrime on criminal and regulatory practices in Canada as well as other Western nations across the globe.

The media continue to have a significant persuasive influence on the public perception of crime, even when the information presented is not reflective of the crime rate or actual crime itself. There have been numerous theoretical studies on fear of crime in the media, but few have considered this from a social psychological perspective. This volume brings together an international team of experts and scholars to assess the role of fear and the media in everyday life. Chapters take a multidisciplinary approach to psychology, sociology and criminology and explore such topics as dual process theory, construal level theory, public fascination with gangs, and other contemporary issues.

Fluid overload is often observed in patients with heart failure and secondary oliguric states. A thorough assessment of the fluid status of the patient may help guide the therapy and prevent complications induced by inappropriate therapeutic strategies. The present publication is divided into four parts: Definition and Classification, Pathophysiology, Diagnosis and Therapy. In the first section, the authors present new definitions for heart failure, acute kidney injury and cardiorenal syndromes to facilitate the process of understanding the complex link between the heart and the kidney. Subsequently, different conditions leading to fluid overload are described, followed by an account of emerging diagnostic tools, therapies and technologies devoted to the treatment of patients with severe fluid-related disorders. Clearly structured and written, the present book is a
